Interchangeable Embossing Rolls

In today’s competitive market, it’s crucial to “Leave Your Mark” by ensuring customers know who made the product they are using. Making it easy for customers to identify your product not only helps build brand recognition but also encourages repeat and new business. Why hide your identity? Stand out and invite customers to return!

Shown is a set of master rolls and a complete set of interchangeable inserts.

That’s why we have developed a **cost-effective** solution for customers producing **high-volume** light gauge metal components on a roll form line. Our system eliminates the need to interchange the entire set of rolls, which can be both costly and time-consuming. With our unique quick-change design, you can **set up in minutes** instead of hours, and include significantly more information than before. Easily update part numbers, product names, and approval identifications with minimal disruption to production.

Our precision-made, heat-treated components are **durable and long-lasting**, providing clear embossing details in materials up to 22 gauge. We also offer systems for other thicknesses upon request. The rolls are **custom-designed** to fit your specific machine, regardless of the manufacturer.
